Firmware Release for WAN in MUC.easyplus 4G

1. Download the Netdiscover tool (Chapter 3: Tool Netdiscover) or provide SSH- and SFTP-client manually.
2. Ensure that SSH is enabled in the Tab Security (Section 4.9: Tab Security).
3. Connect to the device using SFTP (Section 3.5: Access to the file system via FTP).
4. Log in using the credentials of user „admin“.
5. Upload the update file ‘20260703-WAN-Release11.enc‘ to the following folder:
   /mnt/ext/Upd
6. Disconnect from SFTP.
7. Connect to the device using SSH (Section 3.6: Access to the command line via SSH).
8. Log in using the credentials of user „admin“.
9. Enter the following command to start the update (end with enter):
   solcmd update-system
10. Wait for the update to complete. This may take approximately 10 minutes.
11. Enter the following command to reboot (end with enter):
    solcmd reboot-system

Alternatively, if access to SFTP/SSH is not available, then the device can be updated using the webpage (Section 4.12.4 Update of the firmware). But for the update to proceed, the main application is required to shut down, therefore the connection is lost, and it is required to wait for the update to complete without feedback.
